

Issue 2 The information hub is designed to provide - mainly technical - information relating to Water Coolers and Boilers, to assist you with your work

SIP Automatic Cooler Sanitising & Electricity Savings

SIP 2000 REDUCES Sanitising Call Outs by 50%, REDUCES your customers electricity bills and guarantees maximum Cooler Hygiene.

SIP Sanitising

● **SIP** sanitizes by circulating micro- bubbles of chemical-free ozone into your cooler's reservoir.

● Each night, **SIP** activates for approximately 5-minutes to sanitize the water cooler.

● Bio-film, bacteria, viruses, mold and algae can't survive proper ozone exposure - nature's most powerful oxidizing agent.

● With technology inspired by nature, you can rest assured that your water will be great to **SIP**.

SIP Sleep Mode Electricity Savings

SIP can reduce your customers electricity bills significantly by putting the Cooler into an overnight sleep mode.

Example

12 hours sleep mode (19.00 to 07.00) on a Hot & Cold Cooler will save about £50 per year in electricity (and 240kg less Carbon, by using less power.) For an Ambient & Cold Cooler these savings reduce to 1/5th.

Can be fitted to most POU and Bottled Water Coolers

A win win situation all round!
