

### What Is Sip Neo3?

Sip Neo3 is a small and discreet automatic sanitising device. The device is installed inside a cooler and is neatly connected to enhance any tank fed water cooler.

Programmable and effective, the Sip device provides both you and your customer with peace of mind, whilst offering some truly exceptional features.

- Reduces your sanitising visits by up to 50%
- Reduces electricity consumption through sleep mode technology
- Reduces carbon emissions by keeping vans off the road

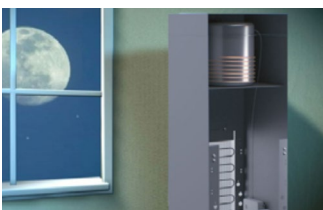

### How Does It Work?

When installed, a Sip device sanitises the cooler by circulating micro bubbles of ozone into the cooler's reservoir.

Bacteria, viruses, mould and algae can't survive exposure to ozone, one of nature's most powerful oxidising agents.

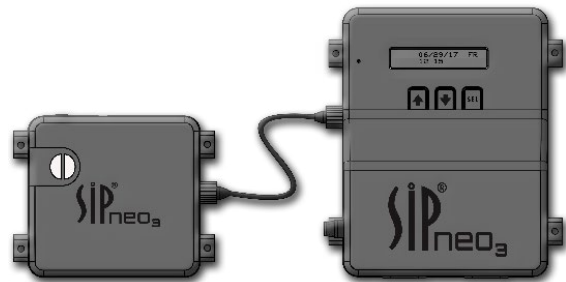

Every night when the cooler is not in use, Sip activates as programmed, to automatically sanitise the water cooler.

With technology inspired by nature, you and your customers can be rest assured that your water is safe to Sip.

### The Importance Of Sip

Sanitising is an essential part of correctly and safely maintaining any water cooler. The automatic sanitising feature ensures you adhere to the highest hygiene levels whilst providing you with peace of mind.

Sip devices offer more than just sanitisation, they also have sleep mode capabilities. The sleep mode function allows your customers to program the device to activate at a time that suits them.

Sip is designed to be environmentally friendly, keeping vans off the road by greatly reducing the amount of sanitising visits from engineers.

### How To Install Sip

We offer a pre-installation service so you don't have to worry about installing the device yourself. However, you can also purchase a Sip device on its own for self installation.

The installation process is simple and easy, but requires a few steps. To help make things straightforward, we have created a step by step installation video. The video also covers how to programme the device to suit your customers needs.

Click the button below to watch the installation video, and set your Sip automatic sanitising device up with confidence.
